Troubleshooting

Where your stuff lives

WHAT THRONE IS

A trading terminal plus robot traders, built for regular people.

Big Wall Street firms pay about \$30,000 a year for a Bloomberg Terminal. THRONE puts the useful parts of that on your own computer using free, public data, then adds things Bloomberg doesn't have:

- **Copy the smart money.** It watches what members of Congress, company insiders (CEOs buying their own stock), big funds and crypto whales are trading, and can copy them automatically.
- **Robot traders.** Pick from 50+ ready-made trading strategies or build your own, test them on years of real prices, then let them run.
- **Everything else that moves money:** industries heating up or cooling off, prediction markets, collectibles and console restocks, dirty money and hacks, plus tools to make money with content.

SAFE BY DEFAULT

Out of the box THRONE trades a *simulated* \$100,000 account at real live prices. It really trades, just with play money. No real money moves until you connect a broker and switch to Live yourself.

START IN 5 MINUTES

1. Open it. Double-click `THRONE-windows.exe`. After the crown splash it offers to

 **Install:** that adds THRONE to the Start menu (and desktop), makes notifications clickable, and puts an uninstaller in Settings → Apps. No admin needed. Press *Not now* to just run it. Update later by opening a newer download and pressing **Update**; your data is kept.

2. Read the two badges at the top. The gold one is your license (`FREE` , `PRO` or  `GOD MODE`). The other shows whose money is used: `SIMULATED` = \$100K of play money at real live prices, `PAPER` = your broker's practice account, `LIVE` = real money.

- 3. **Click Settings** and type your email in the SEC box. The government requires it to read insider filings. That's the only required setting.
- 4. **Click ▶ Start bot.** It checks for new trades every minute while the app is open. Watch "Live activity" on the Dashboard to see what it's thinking.
- 5. **Leave it running** for a few days, then open Dashboard → *What's working* to see which kinds of signals made money.

Pro moves

DO THIS	TO
Ctrl+K or /	🔍 Search anything: a ticker (NVDA), a company ("tesla"), a coin ("bitcoin"), any tab or action ("autopilot", "privacy"). Then chart it, research it, make the AI Arena debate it, or draw tarot cards for it.
Ctrl+1 ... Ctrl+8	Jump to the eight sections (Portfolio, Markets, Research, Automation, Risk, Alternatives, Earn, More)
Ctrl+B	Start / stop the bot
Ctrl+H	🙊 Privacy mode: blurs your balances for screenshots and streams
Ctrl+T or 📺 Ticker (title bar)	Turn the scrolling stock ticker on or off (remembered). Hover to pause it, click any price to chart it.
Ctrl+, · F5	Settings · refresh

The title bar also shows whether the US stock market is open, with a countdown to the open or close. Crypto trades 24/7.

Optional keys (all free to start)

KEY	WHAT IT UNLOCKS	WHERE TO GET IT
Alpaca API key	Trading in your own broker account (paper first, then live)	alpaca.markets → sign up → API keys
Anthropic API key	📺 Ask AI research, AI Verdicts, the ✨ Oracle's personal answers, Autopilot's AI review and AI-written posts	console.anthropic.com (pay-as-you-go, cents per question)
Kalshi key	Betting on prediction markets (demo first)	kalshi.com → Account → API keys

KEY	WHAT IT UNLOCKS	WHERE TO GET IT
FEC key	More Super PAC lookups per hour in Dirty money	api.data.gov/signup
PriceCharting token	Live prices for rare games and consoles	pricecharting.com/api (paid)
OANDA token	Forex trading in your own OANDA account (practice first, then live)	oanda.com → My Account → Manage API Access

NEW: SECTIONS, FOREX, AI SIGNALS, ORACLE

THRONE now groups its pages into eight sections, like a professional terminal. Pick a section on the top row, then a page on the row under it.

SECTION	PAGES
Portfolio	Portfolio · Financial Planning
Markets	Market Monitor · Charts & Trading · FX · Sectors · Prediction Markets
Research	Equity Research · Analytics · Congress & Insiders (where the politicians are) · Social Sentiment
Automation	Trading Bots · Strategy Lab (AI Arena) · Thematic Baskets (Playlists)
Risk & Intelligence	Money Flows (Dirty money) · Cyber Risk (Hacks & leaks)
Alternatives	Collectibles & Digital Assets
Earn	Income Ideas (fast cash) · Creator Studio
More	Tarot & Numerology

AI Verdict & Signals

PRO

Research → Analytics. Type any ticker for a **Strong Buy / Buy / Hold / Sell / Strong Sell** call from six factors (trend, momentum, RSI, news tone, smart money, analysts), with support, resistance and a stop level. The 📡 Signals board ranks a whole watchlist at once. With an Anthropic key, the AI also reads the latest news and writes a summary with long or short reasons. Also here: RV (compare to peers), DCF (fair value), CORR, PORT (stress tests), ECST (economy) and EVTS (how the stock moves on earnings).

FX (Forex)

FREE

Markets → FX. 20+ currency pairs and gold with live bid/ask, the trading sessions (Sydney, Tokyo, London, New York), and a ticket with a risk calculator: say how much you're willing to lose and it sizes the trade in lots.

Trades a simulated \$10,000 account by default. Connect an OANDA practice token to trade your demo account. Live OANDA needs PRO and the typed phrase, same as stocks.

Collectibles & Digital Assets

FREE

Prices for Pokémon, Magic and Yu-Gi-Oh! cards, CS2 skins (Steam market), Roblox limiteds (with their real-money value), and NFT collections (floor price, volume, trending). Sort by price or change, set a minimum price, and add a price alert to any card or item.

Social Sentiment

FREE

What's going viral right now: trending searches, hot posts, memes and meme templates, meme stocks and meme coins. Press Make a post on anything to turn it into content in Creator Studio.

Income Ideas

FREE

Legit ways to make money fast, ranked for you: selling stuff you own, gig apps, cashback, unclaimed money and class-action settlements you may be owed. The 🛡️ scam shield lists the "fast money" tricks to avoid.

Charts & Trading

FREE

Line, mountain, bars or candles. 🔍 slider sets candle size, drag to scroll, Volume on/off. Overlays: moving averages, Fibonacci, trend channel and compare. 📺 Terminal gives a Bloomberg-style black screen. Drag the gaps between panels anywhere in the app to resize them. "Reset layout" in Settings puts them back.

The header also has 🎧 Music (opens Spotify, Apple Music, YouTube Music or YouTube and controls play/pause; it never asks for your password), Discord and X buttons, and a 🔔 alerts inbox.

EVERY TAB, EXPLAINED

Tabs marked PRO need a PRO or GOD license. Click any ticker anywhere to open its chart. Some pages have new professional names in the app (see the table above); the descriptions below still apply.

Dashboard

FREE

Your account value, positions, the bot's pending ideas (Signal radar) and live activity.

Sub-tabs: Trade journal (every bot trade and why), What's working (which signal types win), Risk (beta, sector mix, "if the market drops 10%", dividends, tax-loss ideas).

🎵 Playlists

FREE

Themed portfolios you invest in with one tap: AI Kings, Dividend Income, Nuclear, Sneakerheads, Gamer Life and more, plus live ones built from THRONE's data (What Congress Is Buying, Insiders Are Buying, Reddit's Favorites).

Invest any amount (it's split evenly), set it to rebalance monthly, make your own and share it with a code. Also: ⌚ Time Machine, a 🎲 quiz that picks a mix for you, and 📺 Learn lessons.

🏢 Industries

FREE

27 industries from AI and crypto to cannabis, gambling, dating apps and OnlyFans, each marked IN FAVOR, NEUTRAL or OUT OF FAVOR.

Based on the industry's stocks over 1 and 3 months plus how much news it's getting and whether that news is good or bad. Click one for its headlines.

💰 Dirty money

PRO

Follow the money: Super PAC spending for or against candidates, who pays lobbyists, crypto wallets the US Treasury sanctioned (with live balances), 💊 Big Pharma (drugmakers' stocks, lobbying spend, FDA recalls, lawsuits and price hikes), the size of the dark economy, and fresh busts.

All from official public records (FEC, Senate, Treasury, FDA, DOJ, UN).

Hacks & leaks

PRO

Companies that reported cyberattacks to the SEC (and how their stock reacted), crypto exploits, software attackers are using right now, and breach news.

Alerts you about new ones every 30 minutes.

Terminal

FREE

The Bloomberg part: daily brief, world markets, movers, minerals and commodities, screener, heatmap, rates and currencies, news from 11 desks, economic and earnings calendars, live TV and podcasts.

Candles

FREE

Charts for any stock or coin, a watchlist, price alerts and Quick trade.  slider (or mouse wheel) sets candle size, drag to scroll back. Overlays:  moving averages, ϕ Fibonacci levels,  trend channel, and "vs" to compare with another ticker.  **Terminal** turns it into a Bloomberg-style screen: black chart, function keys, key data and headlines.

Quick trade does market, limit, stop, trailing-stop and bracket orders (automatic take-profit plus stop-loss). Open orders live in the Orders panel.

Research

PRO

Everything about one company: our A–F rating, analyst targets, earnings beats, financials, options chain and options strategy analyzer, performance vs the market, best and worst months, holders and news.

 Ask AI answers questions with sources, using THRONE's own data too.

Bots

PRO

Robot traders. Build rules, test them on history, turn them on. Includes a 52-bot library and an AI scanner that finds setups firing today.

 Autopilot lets the AI manage a budget for you each day ([how](#)). See [Building your own bots](#).  Copy a trader follows any Hyperliquid crypto trader and can copy their trades.

Smart money

PRO

Every Congress trade with photos, a leaderboard of whose picks actually beat the market, insider buys, big funds (Buffett, Burry...), crypto firms and whales, and the White House.

Collectibles

PRO

Restock alerts for consoles, GPUs and sneakers, drop calendar, rare games and consoles, sneaker news and resale checks, Pokémon and Magic card prices, and your collection's value.

Make money

PRO

Find what's trending, turn it into short videos, posts, affiliate pitches and outreach emails.

See [Making money with content](#).

Plan

FREE

Retirement and goal planner. Enter your goal, savings and years; it runs 3,000 possible futures and tells you your odds and how much to save.

AI Arena

PRO

Eight trading agents, each with \$100,000 of paper money, compete every day. See who's winning, read their trades and ideas, make them debate a stock, and copy the best one.

See [The AI Arena](#).

Fast Cash

FREE

Need money quickly? Tell it how much, by when, and what you have (car, computer, stuff to sell, skills). It ranks 24 legit ways from "cash today" to "weeks", with realistic dollar ranges and first steps. Also: 🌱 money you're owed (unclaimed property, refunds, live class-action settlements), 💻 real SOLD prices for your stuff, and a ❤️ scam shield.

With an AI key it writes you a day-by-day plan.

Discord & X

FREE

Header buttons: open Discord (paste your server's invite once for a "Join our Discord" button), open X, or "Post this stock on X" to draft a post about the chart you're viewing.

THRONE never logs in or posts for you; you post it yourself.

Music

FREE

The headphones button next to the bell: open Spotify, Apple Music, YouTube Music or YouTube, search, quick mixes (lo-fi focus, hip-hop hustle...), and ⏮ ⏪ ⏩ ⏭ 🔊 controls for whatever is playing.

Safe by design: THRONE never asks for your music passwords. It opens the official app or site.

Tarot

FREE

Tarot readings (daily card, yes/no, 3, 6 and 10-card spreads, money and love readings, even a "market reading" for a stock), a card-meanings library, a quiz and numerology.

For fun and reflection. See [Tarot & numerology](#).

Predictions

FREE

Kalshi and Polymarket odds, an Edge finder that spots where they disagree, a bet slip and auto-bet rules.

HOW THE COPY BOT DECIDES

Each time it runs, the bot collects **signals**: a CEO buying their own stock, a senator disclosing a trade, a fund adding a position, a whale moving crypto.

- 1. Signals add up.** Two insiders plus a senator buying the same stock scores higher than one person. It only buys once the total score passes your threshold.
- 2. Safety checks.** It skips penny stocks, "falling knives" (stocks far below their 50-day average) and stocks that already jumped 30% in 10 days.
- 3. Position size.** A small percentage of your account per trade, more for stronger signals, never above your dollar cap.
- 4. Exits.** Stop-loss, take-profit, trailing stop, maximum days held, or when the people it copied start selling.
- 5. Daily brakes.** A maximum number of trades per day, and no new buys after a bad day.

IT NEVER TOUCHES YOUR OWN TRADES

The bot only manages positions it opened itself.

COPYING HAS A DELAY

Congress can wait up to 45 days to report a trade, and insiders have 2 days. You're copying news, not reading minds. Test before using real money.

PLAYLISTS FOR BEGINNERS

The easiest way to start: pick a theme you believe in and invest in all of it at once.

1. Open 🎵 **Playlists** → 🗨️ **Find my playlists** and answer the four questions. You get a starter mix: a steady core (like the whole S&P 500) plus a few themes you care about.
2. Or browse **Discover**. Each playlist shows how it did over 1 month, 1 year and 3 years next to the S&P 500.
3. Type an amount and press **Invest now**. It's split evenly across the picks using fractional shares, so even \$25 works.
4. Want it to look after itself? Press 🔄 **Auto-rebalance monthly** and it becomes a bot that keeps the playlist balanced.
5. Curious what patience would have earned? ⌚ **Time Machine** shows what \$1,000 in any stock or playlist from 1–10 years ago is worth today.

MAKE IT YOURS

Create your own playlist from any tickers, press 🔗 **Share** to copy a code, and friends paste it under **Import** in their THRONE.

AUTOPILOT: LET THE AI DRIVE

Give the AI a budget and it checks the markets every day and decides what to buy, sell or hold, in stocks, crypto and forex.

1. Open **Automation** → **Trading Bots** → 🧠 **Autopilot**. Set a **budget** (the most it can have invested), **max per trade**, **trades per day** and the **time** it runs (pick a time when the US market is open, like 10:00, so it can trade stocks).
2. Choose a **style** (Careful, Balanced or Aggressive) and what it may trade: **Stocks & ETFs**, **Crypto** and **Forex**. Set the **forex risk per trade** (1% means a forex trade that hits its stop loses about 1% of your FX account).
3. Pick **Trade automatically**, or **Suggest only** to approve each day's plan yourself with one button.
4. Flip the switch to **ON** and press **Save**. Press ▶ **Run today's review now** any time to see what it thinks.

Each day it reads index and crypto prices, the VIX, yields, headlines, what Congress and insiders are buying, the copy bot's waiting signals, the AI scanner's setups (with each one's 5-year track record) and its own positions. With an Anthropic key, Claude also searches the web for fresh news. You get a notification and a written report: its view of stocks and crypto, every trade with its reason and a confidence score, and links to its sources.

LIMITS THE AI CAN'T BREAK

The app, not the AI, enforces your budget, per-trade cap and trades per day. It only ever sells positions *it* bought. A **stop-loss** sells any of its positions that drops past your % (checked hourly), and a **kill switch** pauses it if its total loss passes your % of the budget.

Which account it uses: every mode

WHAT	WHERE THE MONEY IS
Stocks & crypto	Whatever mode Settings is on: SIMULATED \$100K play account, PAPER Alpaca practice, or LIVE your real Alpaca account.
Forex	Whatever Markets → FX is set to: THRONE's simulated \$10K FX account, OANDA practice, or OANDA live (needs PRO and the risk sentence).
Prediction markets	The Kalshi auto-bettor in Prediction Markets (demo or live), with its own bet limits.

Forex trades can be long or short. Each one gets a stop-loss and a take-profit placed with the trade, and is sized from your risk %. It holds at most 3 forex trades at once, and the kill switch counts forex losses too. Without an Anthropic key the forex rules follow clear trends (price above or below its 20- and 50-day averages with a real one-month move) and close when the trend flips.

Hands-free: let it run on its own

1. Turn Autopilot on as above.
2. Open **Settings**, tick  **Hands-free** and save.
3. That's it. THRONE now starts when you sign in to Windows, hidden in the tray (the crown by the clock), starts the bot and Autopilot by itself, and keeps working

when you close the window. At 6pm you get a notification with your account, Autopilot's moves, forex results and the number of trades.

4. Click the tray crown to open THRONE. Right-click it → **Quit THRONE** to really stop everything. Untick Hands-free to go back to normal.

YOUR MODE NEVER CHANGES BY ITSELF

Hands-free and Autopilot trade in whatever mode you picked. Real money only happens if *you* switch to Live (PRO plus the typed sentence). Without an Anthropic key Autopilot uses a simpler rules engine. AI makes mistakes, so watch it for a few weeks before giving it real money. On a Mac, hands-free keeps THRONE in the menu bar, but you start it yourself after a restart.

THE AI ARENA

A trading competition between robots, so you can see which style actually works before you trust it with money.

AGENT	HOW IT TRADES
 The Bull	Buys trend and breakout setups with the best 5-year record. Cuts losers at -10%.
 Capitol Hill	Copies stacked Congress and insider buying.
 The Contrarian	Buys oversold big companies and sells the bounce.
 Crypto Degen	Crypto only. Holds coins that are trending, dumps them when they break.
 Steady Eddie	Each month holds the 3 strongest of stocks, bonds, gold, real estate, energy and commodities.
 Claude Balanced ·  Claude Aggressive	Claude reads the market and the news and decides (needs an Anthropic key).
 S&P 500	The benchmark: buys the index and never trades. Beat this or what's the point?

1. Open 🏠 **AI Arena**. A round plays every day at 10:30 (change it under ➕ Build an agent), or press ▶ **Play today's round**.
2. 🏆 **Leaderboard** ranks agents by return and shows how they did vs the S&P, their Sharpe ratio (return for the risk taken), worst drop and win rate. Click one to see its positions, trades and latest thinking.
3. 📄 **Signal feed** shows every trade (Operations), idea (Strategies) and debate (Discussions).
4. 🗣️ **Ask the arena**: type a ticker and every agent argues BUY, HOLD or SELL.
5. ➕ **Build an agent**: describe your own strategy in plain English and Claude trades it in the arena.

COPY THE WINNER

Tick **Copy** next to an agent and set a dollar amount. From then on its buys and sells are repeated in your account (in the current mode, SIMULATED by default). Copies only ever sell what they bought.

GIVE IT TIME

A few days of results is luck. Look for agents that beat the S&P over months, with smaller drops.

TAROT & NUMEROLOGY

1. Open 🗨️ **Tarot** → **Reading**, pick a spread and type your question (open questions like "what do I need to know about..." work best).
2. Press 🔄 **Shuffle the deck**, then click the cards that call to you. Press ✨ **Reveal my reading**.
3. Each card shows its position, whether it's upright or reversed (upside down changes the meaning), and a money angle. Press 📖 **AI interpretation** for a reading that ties all the cards together.
4. ✨ **Ask the Oracle** is a chat. Add your name and birthday (optional), choose 1, 3, 5, 6 or 10 cards, and ask anything. Pick your own cards from the face-down deck, and the Oracle reads them together with your numerology (Life Path, Personal

Year, today's number). Ask follow-ups like a conversation. With an Anthropic key it answers your exact question; without one it explains what each card means for you.

5. * **Card of the day** gives you one card each day. 📖 **Card meanings** lists all 78, 🗨️ **Quiz** helps you learn them, and 🧮 **Numerology** works out your Life Path number from your birthday.

FOR FUN

Tarot is for reflection and entertainment, not investment advice. The 📈 Market reading shows the stock's real chart next to the cards. When they disagree, trust the chart.

COPYING A CRYPTO TRADER

1. Find the trader's **Hyperliquid address** (starts with 0x ; traders often post it in their bio or pinned post).
2. Open 🤖 **Bots** → 👤 **Copy a trader**, paste it, give it a name and press **Follow**. You'll see their account, open positions, win rate and every trade.
3. Leave **Alerts** on to get notified of their trades. Tick **Copy trades** to copy their long entries and exits while the bot runs.

LIMITS

Shorts and coins your broker doesn't list are alert-only. Copies arrive about a minute later at your normal trade size, not their leverage.

BUILDING YOUR OWN BOTS

1. Open 🤖 **Bots** → 📖 **Bot library**. Type a ticker (like SPY or BTC/USD) and press **Compare all** to test every bot on 5 years of real prices.
2. Look at three numbers: **return vs buy & hold**, **win rate** and **max drawdown** (the worst drop along the way). A bot that matches buy-and-hold with half the

drawdown is a good bot.

3. Press **Use this bot**, check the symbol, press ► **Backtest**, tick **Enabled** and **Save**.
4. Press ► **Start bot** in the header. Enabled bots trade only while the bot is running.

Bot types

- **If-then rules:** "buy when RSI is under 30 and price is above the 200-day average; sell when RSI is over 55". 14 indicators to mix.
- **DCA:** buy a fixed amount every week or month, double on big dips.
- **Grid:** buy each step down and sell each step up inside a price range. Good for sideways markets.
- **Portfolio:** hold a basket equally, or rotate into the strongest few every month.

The **AI scanner** checks about 140 big stocks and coins for bot setups firing today and ranks them by how that exact bot did on that exact stock over 5 years. It can scan automatically and alert you.

HONEST RESULTS

On big US stocks, simply buying and holding beat most bots over the last 5 years. Bots mainly help by cutting losses in crashes. Past results don't guarantee future ones.

MAKING MONEY WITH CONTENT

1. 🔥 **Go viral:** see what's trending on Google, Reddit, StockTwits and Wikipedia. Press 🎬 on anything to turn it into a video.
2. 🎬 **Shorts studio:** pick a story (Congress trades, insider buys and big movers come straight from THRONE's data), press *Template* or *Write with AI*, then *Make video*. You get a 1080×1920 video with a voiceover and charts.
3. **Upload it yourself** to YouTube Shorts, TikTok and Reels, and press 📄 *Copy text* for the caption.
4. 📌 **Posts**, 🏠 **Affiliate**, ✉️ **Outreach:** ready-made X posts from today's data, Amazon affiliate pitches with your tag, and personal emails to local businesses.

FIRST TIME MAKING A VIDEO?

Making the MP4 needs the free program ffmpeg. The Shorts studio has an "Install ffmpeg" button that opens Windows' own installer.

POST FROM YOUR OWN ACCOUNTS

THRONE never posts for you. Automated posting bots get YouTube and X accounts banned. Affiliate posts must include the #ad disclosure (the app adds it). Cold emails must include your real address and an easy opt-out.

NOTIFICATIONS

When THRONE does something automatically, or spots something important, it pops up a Windows notification even when minimized:

-  Trades and  bets placed by the bot
-  Your price alerts
-  Strong smart-money signals and  new scanner setups
-  Restocks,  price drops,  drops starting soon and  drops live
-  New company cyberattacks, big crypto hacks and newly exploited software
-  News about your watchlist
-  Autopilot's daily plan and  AI Arena results

1. **Click a notification** (or its *Open THRONE* /  *Open chart* button) and THRONE jumps straight to the right tab or chart, even if it was minimized.
2. **The  bell** next to Settings keeps every alert, with a red count of unread ones. Click any alert to jump to it.
3. ** in the bell** lets you switch each kind of alert on or off, mute sounds, and set  **quiet hours** (trades can still get through).

While THRONE is open in front of you, alerts show as small popups in the corner instead. Turn system notifications off completely in Settings → "Desktop notifications".

GOING LIVE WITH REAL MONEY

READ THIS FIRST

You can lose money. Start small. Run in SIMULATED or PAPER for at least a few weeks and check Dashboard → What's working before switching.

1. Open an account at alpaca.markets and create **paper** API keys.
2. Settings → paste the keys → Mode: **Paper** → Save. The badge turns green: PAPER.
3. When you're ready, create **live** keys at Alpaca, paste them, choose Mode: **Live**, and type the exact safety phrase shown. Live mode needs a PRO or GOD license.
4. Lower the risk numbers first: dollars per trade, trades per day, stop-loss.
5. The yellow "Finish setup" banner has a **Hide** button once you've read it.

LICENSE KEYS

THRONE has three tiers. Keys are checked offline with a digital signature, so there's no account and no internet needed.

TIER	WHAT YOU GET	EXPIRES
FREE	Dashboard and copy bot (simulated/paper), Playlists, Terminal, Candles, Industries, Plan, Predictions	Never
PRO	Everything, including Live trading	Whatever the seller sets (or lifetime)
 GOD	Everything, forever. The owner's key	Never

Activate a key

Click the license badge at the top (or any locked tab), paste the key that starts with `THR1.`, press **Activate**.

One key works on every version: Windows, Mac, Android and iPhone. Activate it once on each device; it's remembered after that. Keys you made earlier keep working in new versions.

Selling keys (owner only)

The key minter lives in `tools\LicenseGen`. Open a terminal in that folder and run:

```
dotnet run -- mint pro "Buyer Name" 365      # 1-year PRO key
dotnet run -- mint pro "Buyer Name"          # lifetime PRO key
dotnet run -- mint god "Your Name"           # GOD key
```

GUARD THE SIGNING KEY

The file `%USERPROFILE%\_throne\license-signing-key.pem` is what makes keys. Back it up somewhere safe and never share it. Anyone with it can make unlimited keys, and if you lose it, every key you've sold stops being renewable.

INSTALLING ON WINDOWS, MAC AND PHONES

Windows

1. Double-click `THRONE-windows.exe`. After the crown splash press  **Install** (Start menu, desktop icon, clickable notifications, uninstaller in Settings → Apps; no admin needed).
2. If Windows SmartScreen says "Windows protected your PC", click **More info** → **Run anyway**. (THRONE isn't signed with a paid certificate.)
3. To update, open a newer `THRONE-windows.exe` and press **Update**. Your data in `Documents\CopyTradeBot` is kept.

Mac

1. Double-click `THRONE-mac.dmg` (or unzip `THRONE-mac.zip`). Drag **THRONE.app** into Applications.

2. The first time: right-click THRONE → **Open** → **Open**. On macOS 15+, if it says it can't be opened: System Settings → Privacy & Security → **Open Anyway**.
3. Still blocked? In Terminal run `xattr -dr com.apple.quarantine /Applications/THRONE.app`.
4. The disk image also has this guide and, if you were given one, a GOD/PRO key file: copy the key into THRONE's license badge → Activate.

Works on Intel Macs and Apple Silicon (through Rosetta), macOS 12 or newer.

Your data lives in `~/Documents/CopyTradeBot`.

Android

1. Copy `THRONE-android.apk` (in `dist\downloads`) to your Android phone.
2. Open it and allow "install unknown apps" when asked.
3. The Home screen shows your account, positions, Start/Stop and settings. The bottom bar has every screen; turn the phone sideways for the big ones.

The bot runs only while the app is open.

iPhone

Apple only allows iPhone apps to be built on a Mac. Put the project on GitHub and run the **Build THRONE** action; it produces an .ipa you install with AltStore or Sideloadly.

GLOSSARY

Ticker	A stock's short code: AAPL is Apple, BTC/USD is Bitcoin.
Paper trading	Practice trading with fake money at real prices.
Insider (Form 4)	A company's executives and directors. They must report their own trades to the SEC within 2 business days.
13F	Quarterly holdings report big funds file. About 45 days old when it comes out.

8-K Item 1.05

The SEC form a public company files when it has a serious cyberattack.

Backtest

Running a strategy on past prices to see how it would have done.

Drawdown

The biggest drop from a high point. -30% means it fell 30% at its worst.

Win rate

The share of trades that made money.

SMA / EMA

Moving averages: the average price over the last N days. "Above the 200-day" means a long-term uptrend.

RSI

0–100 gauge of how stretched a move is. Under 30 is oversold, over 70 is overbought.

Beta

How much something swings vs the S&P 500. 2.0 means twice as much.

Stop-loss

An automatic sell if the price falls a set amount, to cap the loss.

Limit order

Buy or sell only at your price or better.

Bracket order

A buy with an automatic take-profit and stop-loss attached; when one fills, the other cancels.

DCA

Dollar-cost averaging: buying a fixed amount on a schedule no matter the price.

Put/call ratio

Bets on a fall vs bets on a rise. Above 1 means traders are nervous.

Max pain

The price where options buyers lose the most at expiry. Stocks often drift toward it.

Super PAC

A group that can raise and spend unlimited money for or against candidates, as long as it doesn't coordinate with them.

OFAC sanctions

Treasury's blacklist. US persons can't do business with anyone on it, including its crypto wallets.

TROUBLESHOOTING

The bot isn't buying anything

Usually that's correct: no signal has scored high enough, or the stock market is closed (crypto trades 24/7). Check the Signal radar on the Dashboard: it shows what's waiting and why.

A screen says "couldn't load"

The free data source was slow or busy. Press Refresh or try again in a minute.

A tab shows a lock screen

It's a PRO tab. Enter a license key (click the badge at the top).

The restock monitor says "blocked"

Some stores (Best Buy, Walmart, GameStop) block automated checks. Use their own app's alerts for those, and the drop calendar for release times.

Stock orders say the market is closed

The practice account only fills stock orders 9:30am–4pm Eastern on weekdays, like the real market. Crypto works anytime.

Something crashed

Details are saved in `Documents\CopyTradeBot\logs\errors.log`. The app keeps running.

WHERE YOUR STUFF LIVES

Everything is on your own computer in `Documents\CopyTradeBot` on Windows, or `~/Documents/CopyTradeBot` on a Mac (the folder kept its original name so nothing was lost when the app became THRONE):

FILE	WHAT IT IS
<code>appsettings.json</code>	All your settings and API keys
<code>sim-account.json</code>	Your practice account
<code>license.key</code>	Your license
<code>autopilot.json</code>	Autopilot settings, its positions (stocks, crypto, forex) and every daily report
<code>fx-sim.json</code> · <code>fx-oanda.json</code>	Your simulated forex account · your OANDA connection
<code>hands-free.json</code>	Hands-free mode on/off and the daily summary time
<code>videos\</code>	Shorts you've made
<code>logs\</code>	Activity and error logs

THRONE is a tool, not financial advice. Every trade is your decision and your risk. Data comes from public sources (SEC, Congress, Treasury, exchanges, news sites) and can be delayed or wrong.
